WasPOS
By TSC

The WasPOS EPOS module is a fast and effective point of sale system which seamlessly integrates with Wasp InventoryControl. Written by TSC Business Solutions, the WasPOS module is a single, joined up solution for retailers who want to combine full warehouse stock management with quick and simple retail, Cash & Carry and Account sales.

Seamless link to Wasp InventoryControl

Intuitive and easy to use
Account sales using InventoryControl customer database

Separate reporting module for financials

Hot keys for non-barcoded or frequent sale items

Complete hardware options available

How does it work?

WasPOS's barcode scanner recognises the Item number you have allocated in InventoryControl or the EAN number from your supplier in the alternate barcode field, so you don't have to re-barcode products you have purchased for onward sale.

Within InventoryControl, stock can be located either in a separate location, such as a shop, or in the primary or default location. When an item is sold through WasPOS the stock is down dated using the Remove feature in InventoryControl and the transaction is written to the transaction log and will also appear in the various related reports within InventoryControl.

A separate reporting module within WasPOS allows an administrator access to financial reports such as total sales value, VAT, etc. These reports can be exported to Excel for further analysis.

An infinite number of hot keys can be programmed to quickly process sales for items that aren't barcoded or that are frequent sales.

WasPOS can handle cash sales as well as account sales, taking customer account details straight from InventoryControl. Sales can they be shown in the Customer Remove report.

WasPOS gives InventoryControl more flexibility and allows the product to be used to tie warehouse and shop stock control together like no other product on the market at a similar price.

WasPOS will run with the Wasp Complete Point of Sale Hardware Kit

The kit delivers the components you need to build a successful EPOS system, from a barcode scanner and point of sale keyboard to pole display, cash drawer and receipt printer. Simply add a PC and monitor to complete your point of sale workstation.

The Complete EPOS hardware kit includes:

- WLR8900 CCD LR Barcode Scanner
- WRP8055 EPOS Receipt Printer
- WPD720 Pole Display
- WKB1155 EPOS Keyboard with Integrated MSR
- WCD5000 Cash Drawer
- EPOS Shoe

The WasPOS software will run on a standard Windows PC or, if you require it we can supply the dedicated WasPOS point of sale terminal.

For those looking for an entry level solution, the WasPOS 15" bezel-free terminal with capacitive touch screen makes taking that step from cash register an easy decision. Ideal for the budget conscious buyer, this terminal wouldn't look out of place in retail stores or hospitality outlets and is equipped with the power, specification and features that are essential to cope with the demands of busy sales environments.

The WasPOS Point of Sale terminal comes with a state-of-the-art Intel Celeron Quad-core 2.0 GHz processor and 4GB of RAM and is a fully integrated bezel free touch monitor POS terminals with USB connections for Receipt printer, cash draw and rear facing customer display.
